- What instruments can you hear?
- Clap the beat: fast, medium or slow?

WHAT THE HECK IS EMULATION?

- Recreating a track’s style and sound as closely as you can
- Not just copying: reverse-engineering a hit
- Same tempo, same form, your own drums
- Then build your own version from scratch

STEP 1: EXPLORE THE TOP 10

1. Listen to all 10 songs
2. Fill in the Top 10 analysis
3. Pick one song with clear, easy-to-hear sections
4. Start counting bars: where does each section begin?

SONG FORM: WHAT TO LISTEN FOR

- Intro, verse, chorus, bridge, outro
- Count the bars in every section
- Write down when each section starts
- Finish the Song Form map before Logic

WORKED EXAMPLE: A MAPPED SONG

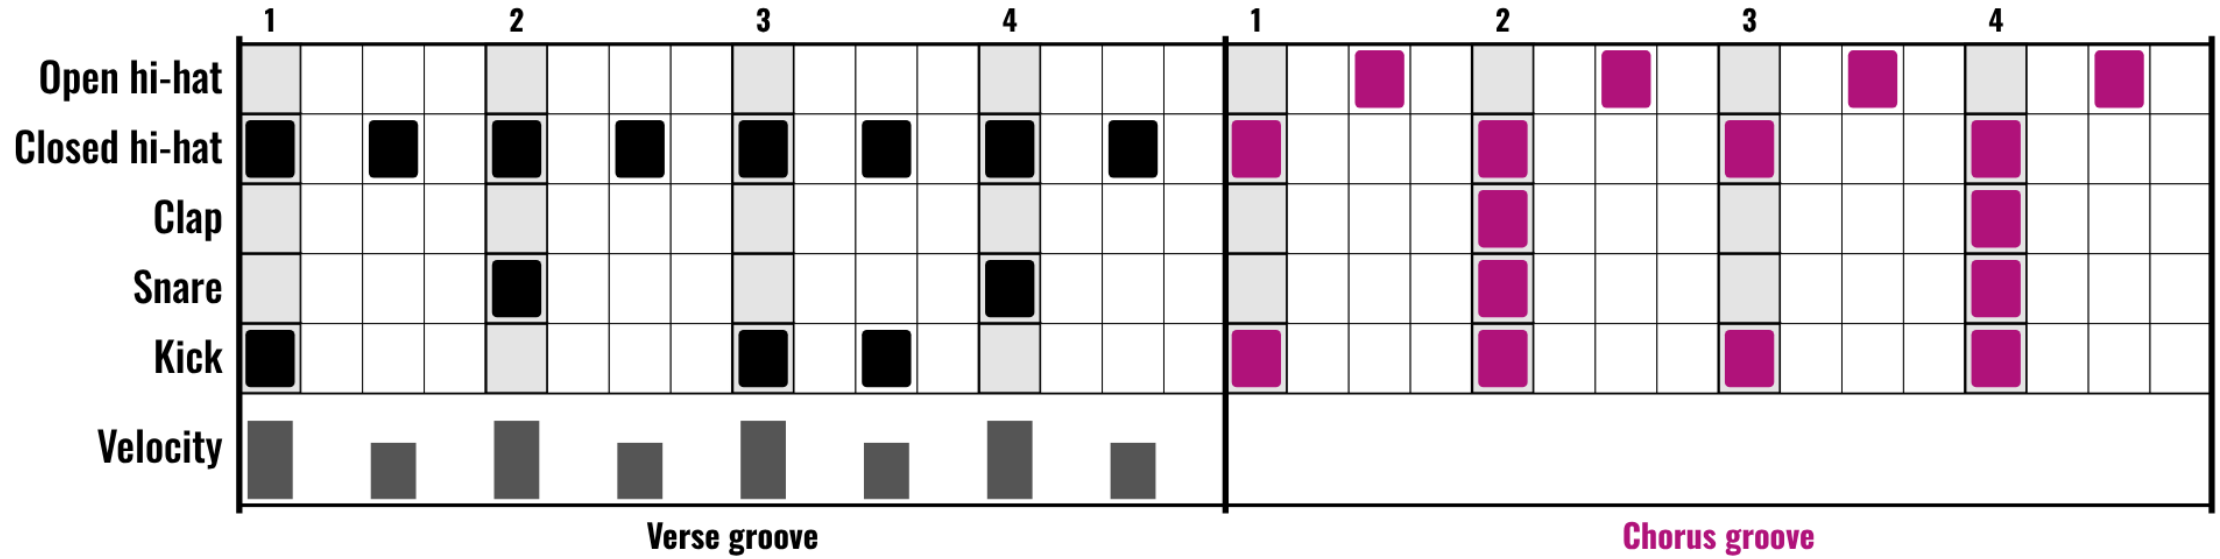

- 72 bars at 100 BPM: 2:53
- One Arrangement Marker per section
- Count bars, not seconds
- Verses 16 bars, choruses 8

WATCH ME: TEMPO AND MARKERS

1. Count the beats for 15 seconds, then × 4 = BPM
2. Set the project tempo to match
3. Metronome on (K): play the song alongside it
4. Global Tracks (G): one Arrangement Marker per section
5. Save as: Your Name – Billboard Top 10

WORKED EXAMPLE: BREAK DOWN THE DRUMS

- Verse: hi-hat eighths, snare on 2 and 4
- A clap doubles the snare in the chorus
- Chorus: kick on every beat, open hi-hats
- Velocity: louder on the beat, softer between

WATCH ME: PROGRAM THE DRUMS

1. New track: an Electronic Drum Kit (Drum Machine Designer)
2. Pattern region at the first verse marker
3. Kick, snare, hi-hat first: copy what you hear
4. Vary the velocity so it doesn’t sound robotic
5. Copy it into every section that uses it
