FOUND SOUND

How to use this resource

START HERE

Teacher

WHAT THIS IS ·

A 7-class-period sound design project for high school music technology. Each student records at least five everyday sounds, trims and normalizes them in Logic, turns them into playable instruments with Quick Sampler, and composes a 30–60 second piece with at least three layers (percussion, bass, texture), built entirely from those found sounds. It is an open-ended project from my Digital Music Production 2 course (focus: sound design), and the projects in that course can be taught in any order.

QUICK START ·

1. Read the pacing guide (page 5) and my teacher notes (pages 6–7).
2. Practice the Class 1 demo: record, trim, normalize and play one sound in Quick Sampler (page 4).
3. Print the student pages (pages 12–21), one set per student.
4. Open the intro deck and read the speaker notes for Class 1.

THE INTRO DECK ·

Every slide has a class: Class 1 (slides 1–7), Class 2 (slides 8–10), Class 3 (slides 11–12), Class 4 (slides 13–14), Class 6 (slides 15–17) and Class 7 (slides 18–19). Class 5 is a working day with no new slide. Every slide has speaker notes.

Fonts: the deck uses Oswald and Source Sans 3 (free on Google Fonts, built into Google Slides). If PowerPoint or Keynote shows a different font, install the two fonts or present the PDF copy, which shows the intended look.

WHAT'S INSIDE ·

PART	PAGES	USE
Teacher pages	pages 2–11	How to use, overview, setup, pacing, teacher notes, what changed, Logic quick reference, Quick Sampler modes, worked example
Student pages	pages 12–21	Sound log, Instrument builder, Layer plan, project sheet (3 pages), rubric, vocabulary, feedback planner, reflection
Intro deck (separate file)	deck	19 slides, .pptx + PDF, speaker notes on every slide

NO AUDIO INCLUDED

No audio, video, songs or examples are included. Students record every sound themselves, so everything in their pieces is original. For the Class 1 hook, you make a short everyday sound yourself.

MAKE IT FIT YOUR CLASS ·

- **Easier or harder:** my variations on page 6: a bank of sounds to use alongside their own (page 4 lists ten to record), or all-original sources and a 90-second piece.
- **Feedback board:** my sheets use Padlet for the three questions; any class board works.
- **Recording:** a phone or the microphone at each station; students can also record at home.
- **Grading:** my rubric, /25, the average of the student's and your score (page 18).

IN ONE SENTENCE

Students record the world around them, turn it into instruments and play a piece that no preset library could have made.

Logic Pro is a product of Apple Inc. This resource is not affiliated with Apple.

© 2026 Brian Lotze · Hudson Beat · For single-classroom use

FOUND SOUND

Project overview

OVERVIEW

DMP2 · Open-ended

FROM MY DMP2 PROJECT MENU

Found Sound · Open-Ended · Sound Design
Record everyday sounds and transform them into instruments using Quick Sampler. Compose entirely from found sounds.

WHAT STUDENTS MAKE ·

One 30–60 second piece composed entirely from found sounds: at least five original recordings, trimmed and normalized, turned into playable instruments in Quick Sampler, arranged in at least three distinct layers, with effects and automation. They hand in a bounced .mp3 or .wav and the zipped .logicx project, plus a Padlet post with three feedback questions, then play the piece and present it.

WHAT THIS PROJECT REINFORCES ·

Builds recording skills, Quick Sampler proficiency, and sound design thinking. Teaches students that music can come from anywhere, not just preset libraries.

STANDARDS ·

Supports the National Core Arts Standards for Music (Music Technology, high school): generating and developing ideas (MU:Cr1.1, MU:Cr2.1), presenting work (MU:Pr6.1) and responding to it (MU:Re7.2).

GOALS ·

- Record, edit, and manipulate real-world sounds as creative tools
- Use Quick Sampler to build playable instruments from audio recordings
- Design at least three distinct sound layers (percussion, bass, texture)
- Apply effects, automation, and mixing to create a polished composition

AT A GLANCE ·

Grades	9–12: the second-year course, after a first year of Logic Pro basics
Length	7 class periods: record and demo, edit and build, three working days, mix, present
Software	Logic Pro: audio recording and editing, Quick Sampler, effects, automation, bounce
You supply	Macs with Logic Pro, headphones, a phone or microphone to record with, a feedback board, and speakers if you can
Assessment	My rubric, 5 categories scored 1–5, /25; final grade = average of the student's and the teacher's score (page 18)

BEFORE THEY START

Students should already know how to open a project, record and trim audio, add effects, and save, bounce and zip in Logic. Quick Sampler is taught in this project (page 10); the quick reference (page 9) shows where each tool lives.

© 2026 Brian Lotze · Hudson Beat · For single-classroom use

FOUND SOUND

Setup and clean recordings

SETUP

Teacher

YOU NEED ·

- **A Mac with Logic Pro** for each student, and **headphones**. Speakers help for the final listen.
- **A way to record sound:** the microphone at each station, a phone, or another recorder students already use.
- **A way to move phone recordings to the Mac** (AirDrop, a cable, or your class page).
- **A place to submit** an .mp3 or .wav and a zipped .logicx project (your class page).
- **A feedback board** for the three questions (my sheets use Padlet).
- **Printed student pages**, one set each (pages 12–21).

BEFORE CLASS 1 ·

- [ ] Practice the demo on slide 6: record, trim, normalize and play one sound in Quick Sampler.
- [ ] Check that a student computer can record and play back through headphones.
- [ ] Decide where students record: at their desks, around the room, on a short walk with permission, or at home.
- [ ] Print the student pages; set up the submission spot and the feedback board.

CLEAN RECORDINGS (MY FIRST STRUGGLE) ·

KIT SUGGESTIONS, NOT PART OF MY SHEETS

- Get close to the sound and keep the phone still.
- Record in a quiet spot and keep wind and breath off the microphone.
- Record three takes of each sound and keep the best one.
- Record sounds, not songs: music playing from a speaker is someone else's work.
- Ask permission before recording a person, and keep recordings school-appropriate.

FOR MY EASIER VARIATION ·

My variation is a set of pre-recorded found sounds students can use beside their own. No audio is in this kit, so make a small bank in ten minutes with your own phone. Twelve sounds to try (a kit suggestion):

a pen click · a zipper · a drawer · a stapler · a door closing · a water bottle · a chair scrape · keys · a book closing · a locker · a faucet · footsteps

KEEP THE VOLUME MODERATE

Sliced and pitched-down sounds can be much louder than they look. Tell students to start with the headphones low.

© 2026 Brian Lotze · Hudson Beat · For single-classroom use

FOUND SOUND

Pacing guide · 7 class periods

PACING

Teacher

7 class periods, as on my project menu. The "My plan" column is my day-by-day pacing guide as I wrote it; the other columns show what to put on the screen and in students' hands.

CLASS	MY PLAN	TEACHER MOVES	DECK	STUDENT PAGES
CLASS 1	**Class 1:** Introduction. Demo Quick Sampler with a live recording. Students begin collecting sounds.	Slides 1–7: hook, what found sound is, from sound to song, a live demo, steps 1 and 2. Record a sound in front of the class and play it in Quick Sampler. Hand out the project sheet and the Sound log.	Slides 1–7	p. 12, p. 15, p. 16, p. 17, p. 19
CLASS 2	**Class 2:** Edit and prep recordings. Begin building instruments in Quick Sampler.	Slides 8–10: the three Quick Sampler modes, a live demo of all three, go weird. Students trim and normalize, then start the Instrument builder.	Slides 8–10	p. 10, p. 13, p. 9
CLASS 3	**Classes 3–5:** Working days — compose, layer, and mix.	Slides 11–12: compose with your instruments, three layers. Hand out the Layer plan. Then work time.	Slides 11–12	p. 14
CLASS 4		Slides 13–14: the worked example on paper and the layer check. Then work time.	Slides 13–14	p. 14
CLASS 5		Full working day: compose, layer and mix. Ask each student to play you one instrument and say what sound it came from.	No new slides	—
CLASS 6	**Class 6:** Final mix, bounce. Prepare presentations.	Slides 15–17: mix and finalize, what to turn in, the rubric. Students self-score and post their three questions.	Slides 15–17	p. 18, p. 20
CLASS 7	**Class 7:** Presentations with Padlet Q&A peer feedback.	Slides 18–19: presentation day and the close. Every student presents and answers 2 of each classmate's questions. Reflection (page 21) follows the presentations.	Slides 18–19	p. 20, p. 21

THE ONE RULE FOR CLASS 1

Students record before they edit. By the end of Class 1 every student has at least one clean recording on the Sound log (page 12), so Class 2 is spent building instruments, not hunting for sounds.

CLASSES 3–5

Working days. Class 5 has no new slide. Circulate and ask: which layer is this, and what sound did it come from? Instruments that never reach the Layer plan are my third struggle.

© 2026 Brian Lotze · Hudson Beat · For single-classroom use

WHAT THIS PROJECT REINFORCES ·

Builds recording skills, Quick Sampler proficiency, and sound design thinking. Teaches students that music can come from anywhere, not just preset libraries.

COMMON STUDENT STRUGGLES ·

- Students record low-quality audio. Show them how to get clean recordings from their phone or the condenser mic at their station.
- Quick Sampler setup is confusing at first. Demo all three modes (Classic, One Shot, Slice) with a real sound.
- Students create instruments but don't compose with them — they just audition sounds endlessly.
- The 30–60 second length feels limiting. Remind them that density matters more than length.

SUGGESTED VARIATIONS ·

Easier: Provide a set of pre-recorded found sounds that students can use alongside their own.

More Advanced: Require all source sounds to be original recordings (no pre-made sources). Extend to 90 seconds with a clear compositional arc.

WHERE THIS KIT HELPS WITH EACH STRUGGLE

- Low-quality audio: the recording tips on the setup page (page 4) and the Sound log (page 12).
- Confusing Quick Sampler: the modes page (page 10), slide 9 and the Instrument builder (page 13).
- Auditioning forever: the Layer plan (page 14) gives every instrument a job.
- Length: the worked example (page 11) shows 45 seconds with three layers.

© 2026 Brian Lotze · Hudson Beat · For single-classroom use

SUGGESTED RESOURCES ·

MY LIST	IN THIS KIT
Quick Sampler — Turn Any Sound into an Instrument (YouTube)	Named as I listed it. No link, audio or video is included, so find a copy on a service your school allows. My Class 1 demo (slide 6) and the Quick Sampler modes page (page 10) cover the same ground.
Advanced Quick Sampler Techniques (YouTube)	Named as I listed it; nothing is included. Watch it yourself before Class 2 and take what you need for the three-modes demo (slide 9).
Example of a Found Sound editing session (YouTube)	Named as I listed it; nothing is included. This kit gives a worked example on paper instead (page 11): an invented 45-second piece, so you can show what a finished plan looks like without playing anyone else's work.

HOW TO GRADE ·

- My rubric: five categories, each scored 1–5, /25 (page 18). Students score themselves first; the final grade is the average of their score and yours.

Suggestions from this kit, not part of my rubric:

- Creativity & Originality: ask what each source sound was, then play the instrument made from it. My tip 4 is the test: if the audience can't tell where the sounds came from, the transformation worked.
- Technical Skill: look at the Sound log (page 12) and the Instrument builder (page 13). Were at least 5 sounds recorded, trimmed and normalized, and which Quick Sampler modes were used?
- Composition & Structure: use the Layer plan (page 14). Are there at least 3 distinct layers, and does the piece change over 30–60 seconds?
- Sound Design & Mix Quality: listen with headphones and ask which layer is leading in each section. Levels and EQ should be a choice.
- Documentation & Presentation: the Sound log, Instrument builder, Layer plan, Padlet questions and the Reflection page (page 21) are the evidence.

REFLECTION · ADDED BY THIS KIT ·

The rubric mentions reflection, but the project sheet has no reflection task, so this kit adds one (page 21): a written or oral conversation about how you did on the project and what you would do differently next time. Students write it or talk it through with you; either way they answer the four prompts. Allow about 10 minutes after the presentations. It adds no points and no rubric row; use it as evidence when you score Documentation & Presentation.

NOTES / OBSERVATIONS ·

Encourage students to record sounds during passing periods, lunch, or at home. The wider the variety, the better.

© 2026 Brian Lotze · Hudson Beat · For single-classroom use

FOUND SOUND

What changed from the original

CHANGES

Teacher

This kit is built from three of my documents: the **Project Sheet & Rubric**, the **Teacher Notes** and the **Found Sound** entry on my DMP2 project menu. This page lists every change to my wording, so you know exactly what is mine and what was added.

WORDING CHANGES ·

- My LMS name is written as “your class page” (checklist items 1 and 2).
- Page numbers are added to steps 1 to 4 (the Sound log, Logic quick reference, Quick Sampler modes, Instrument builder and Layer plan).
- My three suggested resources are listed as I wrote them (page 7). None is included: no link, audio or video comes with the kit. The kit adds a worked example on paper (page 11) beside the third.
- My pacing guide’s “Classes 3–5” row spans the Class 3, 4 and 5 rows, so each class can name its slides.
- Layout only: the rubric’s Name and Date lines moved to the top; its Notes box became ruled lines.
- The intro deck shortens my wording (full wording on pages 15–17): slide 3 shortens the definition of found sound, slide 7 shortens steps 1 and 2 and my first struggle, slide 10 shortens tips 1, 2 and 4, slide 11 shortens step 4 and my third struggle, slide 12 shortens a goal, a requirement and my fourth struggle, slide 15 shortens steps 5 and 6, slide 16 shortens the submission checklist, and slide 18 shortens step 7.
- **Reflection added (page 21).** My rubric mentions reflection, but the project sheet has no reflection task. This kit adds one, following my definition: a written or oral conversation about how the student did on the project and what they would do differently next time. It adds no points and no rubric row.

KEPT AS I WROTE IT ·

Everything else from my three documents is kept as I wrote it: the goals, the five vocabulary terms, the six requirements, steps (apart from the page numbers), tips, checklist and file name (“Your Name – Found Sound”), the rubric (five categories scored 1–5, /25, the average of the student’s and the teacher’s score), what the project reinforces, the four common struggles, the variations, my day-by-day pacing and my closing note, and the project menu entry quoted on page 3. No rubric row is added and the requirements are unchanged.

NEW IN THIS KIT ·

Everything else is new and supports my sheets without changing them: how to use the kit, the overview and setup pages (with a list of sounds to try for my Easier variation), the teacher moves and slide numbers in the pacing guide, the grading suggestions, the Logic quick reference, the Quick Sampler modes page (three modes drawn), the worked example (an invented 45-second piece on paper, not audio), the Sound log, Instrument builder and Layer plan, the vocabulary page, the presentation planner and the intro deck. None of these adds a requirement or a rubric row. The one addition that asks something of students is the Reflection page (page 21), explained under Wording changes; the rubric is unchanged.

© 2026 Brian Lotze · Hudson Beat · For single-classroom use

FOUND SOUND

Logic quick reference

SETUP

Teacher + student

Where to find the tools this project uses. Demonstrate them on Classes 1 and 2 (slides 6 and 9) and then let students work. Names are from current Logic Pro versions; check the labels on yours.

Record audio	Add an Audio track (Track › New Audio Track), choose the input, arm the track and press Record (R). Use the microphone at your station, or bring in a phone recording.
Bring in a phone recording	Drag the audio file from Finder into the Tracks area, or use File › Import › Audio File. Get the file from the phone to the Mac the way your school allows (AirDrop, a cable or your class page).
Trim and clean up	Split regions (Command-T), delete what you do not need, and trim to the first and last moments of the sound. Use fades to remove clicks.
Normalize	Double-click the region to open the Audio File Editor and choose Functions › Normalize. Menu names vary by version; listen before and after.
Quick Sampler	Add a Software Instrument track and choose Quick Sampler, or drag an audio region onto an empty Software Instrument track and choose Quick Sampler. Pick Classic, One Shot or Slice at the top.
Slice mode	Choose Slice, then adjust how many slices there are and where they fall. Each slice plays from its own key.
Effects	Insert effects on the channel strip: Channel EQ, Compressor, a delay such as Echo, and a reverb such as ChromaVerb or Space Designer.
Automation	Press A to show automation, choose a parameter such as a filter knob or volume, and draw changes over time. A slowly opening filter keeps a loop from feeling static.
Layers	Give each layer its own track (percussion, bass, texture) and name the tracks. Solo each one in turn to check it earns its place.
Save versions	Use File › Save As… with a numbered name before each big change.
Bounce and zip	File › Bounce › Project or Section (Command-B), MP3 or WAV. In Finder, Control-click the .logicx and choose Compress.

VERSION NOTE

Menu names are from current Logic Pro versions; older versions may differ slightly. Logic Pro is a trademark of Apple Inc., named only to describe what the project needs. This resource is not affiliated with Apple.

© 2026 Brian Lotze · Hudson Beat · For single-classroom use

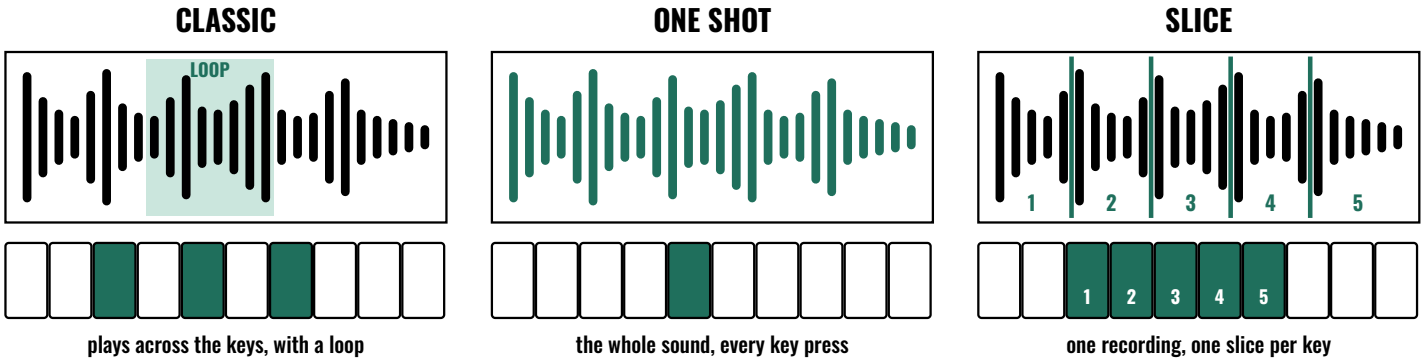

FOUND SOUND

Quick Sampler modes

MODES

Teacher + student

My second struggle is that Quick Sampler is confusing at first, so I demo all three modes (Classic, One Shot, Slice) with a real sound. The pictures show a waveform and the keys it plays on. Names and menus can differ in your version of Logic.

WHICH MODE FOR WHICH JOB ·

MODE	WHAT IT DOES	TRY IT FOR
Classic	Plays the sound across the keys like an instrument, and lets you set a loop.	bass, pads, a hum held under everything
One Shot	Plays the whole sound each time you press a key.	hits, accents, a crinkle or a slam
Slice	Cuts one recording at its loud moments and puts each slice on its own key.	a drum kit from one recording

KIT SUGGESTIONS, NOT PART OF MY SHEETS

Slice mode is my tip 2: one recording becomes a whole kit. Try Classic for bass by playing a pitched-down sound low on the keyboard. If a slice sounds wrong, move its edge to the start of the sound.

TRY THIS IN CLASS 2

Give each pair one recording and ask them to play it in all three modes, then tell the class which mode they would use for percussion, bass and texture, and why.

CHECK YOUR VERSION

Quick Sampler is part of recent versions of Logic Pro. Open it with one of your own recordings before Class 1 and check that the three modes are where this page says.

© 2026 Brian Lotze · Hudson Beat · For single-classroom use

FOUND SOUND

Worked example · an invented piece

EXAMPLE

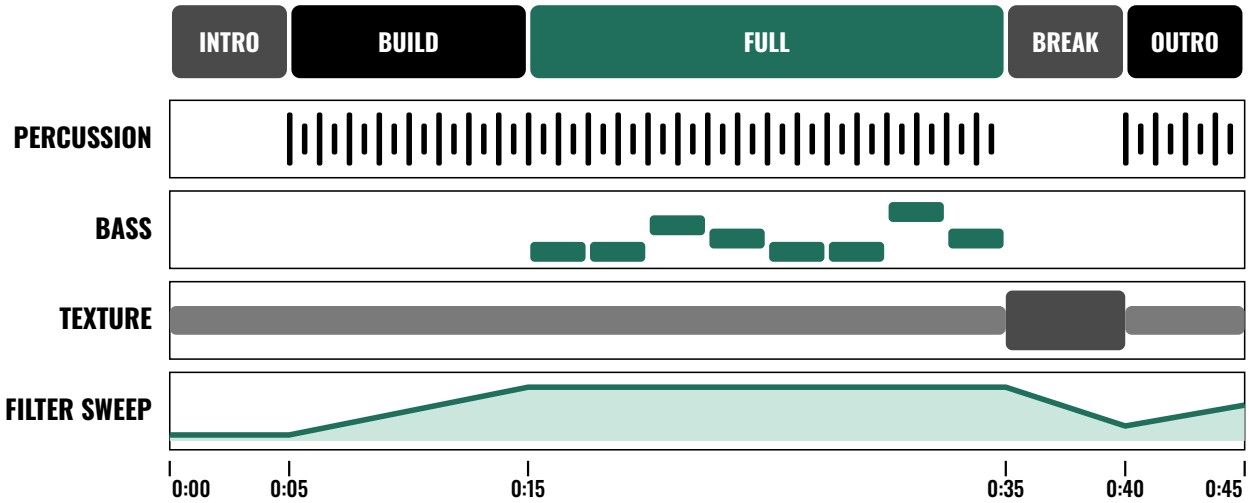

Teacher

An **invented piece, "Passing Period", described on paper**: no audio is included, so the numbers are easy to check. Students' pieces will differ.

1 · THE FIVE SOUNDS ·

SOUND	RECORDED WITH	QUICK SAMPLER	LAYER	WHAT IT DOES
Locker slam	phone, one take	Slice (5 slices)	Percussion	slices on five keys: boom, rattle, click
Pencil tap	station microphone	Classic, short	Percussion	pitched up, played as a tick
Door thud	phone	Classic, pitched down	Bass	played as a simple bassline
Vending-machine hum	phone, 20 seconds	Classic, loop on	Texture	held under everything, filter sweeps
Water-bottle crinkle	station microphone	One Shot	Texture	one press at the start of the Break

2 · THE PLAN: 45 SECONDS ·

Intro 0:00–0:05, Build 0:05–0:15, Full 0:15–0:35, Break 0:35–0:40, Outro 0:40–0:45. The plan is 45 seconds: inside my 30–60 second requirement.

3 · CHECKING THE NUMBERS

96 beats per minute is 0.625 s a beat, so a bar of 4/4 is 2.5 s. Sections: 2 + 4 + 8 + 2 + 2 = 18 bars, and 18 × 2.5 s = 45 s. From 0:15 to 0:35 all three layers play at once. Five sounds are recorded and all five are used.

4 · WHY IT WORKS

Each layer has a job: the hum is the room, the taps and slams are the beat, the thud is the floor. The filter sweep means the texture changes without adding anything. A listener should struggle to guess the sources.

5 · THREE PADLET QUESTIONS (INVENTED) ·

1. Which sound did you guess first, and which one fooled you? 2. If you took one layer out, which one would you miss most? 3. Where does the track change the most, and how did I do it?

© 2026 Brian Lotze · Hudson Beat · For single-classroom use

FOUND SOUND

Sound log

STUDENT

Classes 1–2

Name _____ Date _____

Steps 1 and 2: record at least 5 sounds using your phone or the microphone at your station, then trim, normalize and clean them up in Logic. Name each file the moment you record it. Add the date or a take number if you record a sound twice.

#	SOUND AND FILE NAME	RECORDED WITH (PHONE OR MIC) AND WHERE	TRIMMED AND NORMALIZED? (TICK)	WHAT IT COULD BECOME (PERCUSSION, BASS OR TEXTURE)

The strangest sound I recorded, and how: _____

A recording that did not work, and why: _____

BEFORE YOU MOVE ON

Do you have at least 5 clean recordings? Is every file named and saved in the project folder? Is there at least one sound you could use as percussion, one for bass and one for texture?

© 2026 Brian Lotze · Hudson Beat · For single-classroom use

FOUND SOUND

Instrument builder

STUDENT

Class 2

Name _____ Date _____

Step 3: import your sounds into Quick Sampler and experiment with playback modes. Circle the mode you chose for each instrument. The modes are drawn on page 10.

SOUND (FROM THE SOUND LOG)	QUICK SAMPLER MODE (CIRCLE ONE)	SETTINGS I CHANGED (LOOP, PITCH, START AND END, ENVELOPE, SLICES)	LAYER	HOW IT SOUNDS NOW
	Classic One Shot Slice			
	Classic One Shot Slice			
	Classic One Shot Slice			
	Classic One Shot Slice			
	Classic One Shot Slice			
	Classic One Shot Slice			

The instrument that surprised me most: _____

Which mode did I use the most, and why? _____

BEFORE YOU START COMPOSING

- ☐ I have at least 3 playable instruments
- ☐ I tried Slice on at least one recording
- ☐ I can play each instrument on the keyboard
- ☐ A stranger could not easily guess where the sounds came from

© 2026 Brian Lotze · Hudson Beat · For single-classroom use

FOUND SOUND

Layer plan

STUDENT

Classes 3–5

Name _____ Date _____

Length check: my piece will be _____ seconds (must be 30–60). Tempo: _____

Step 4: use your custom instruments to build a short piece with at least 3 layers (for example percussion, bass, texture). Plan the sections, then say which instrument plays each layer. Density matters more than length.

SECTION AND TIME	PERCUSSION LAYER	BASS LAYER	TEXTURE LAYER	EFFECTS AND AUTOMATION

What I automate, and where: _____

The moment a listener will notice the change: _____

CHECK YOUR LAYERS

- ☐ I have at least 3 distinct layers playing together
- ☐ I can name the found sound behind every layer
- ☐ The piece changes every few bars, not just once
- ☐ Every instrument I built has a job, or I cut it

Something I will change after a classmate listens: _____

Name _____ Date _____

FOUND SOUND

Digital Music Production | *Open-Ended Project* | 7 class periods

OVERVIEW ·

Become a sound designer. Record everyday sounds — from your phone, the microphone at your station, or anywhere around you — and transform them into musical instruments using Logic's Quick Sampler. Then compose a short piece built entirely from your found sounds.

GOALS ·

- Record, edit, and manipulate real-world sounds as creative tools
- Use Quick Sampler to build playable instruments from audio recordings
- Design at least three distinct sound layers (percussion, bass, texture)
- Apply effects, automation, and mixing to create a polished composition

KEY VOCABULARY ·

Found Sound	Any sound from the real world used as raw material for music
Quick Sampler	Logic's tool for turning any audio into a playable instrument
Normalize	Adjusting the volume of a recording so its loudest point hits a target level
Sound Design	The process of creating, manipulating, and shaping sounds for a specific purpose
Layering	Stacking multiple sounds on top of each other to create depth and texture

© 2026 Brian Lotze · Hudson Beat · For single-classroom use

FOUND SOUND

Project sheet · requirements and steps

STUDENT

Name _____ Date _____

REQUIREMENTS ·

- ☐ Record or source at least 5 original audio samples
- ☐ Edit, trim, and normalize sounds in Logic Pro
- ☐ Import sounds into Quick Sampler to create playable instruments
- ☐ Design at least 3 distinct sound layers (e.g., percussion, bass, texture)
- ☐ Apply effects and automation for dynamics and interest
- ☐ Length: 30–60 seconds

STEPS / PROCESS ·

1. **Collect sounds** — Record at least 5 sounds using your phone or the microphone at your station (Sound log: page 12)
2. **Edit and prep** — Trim, normalize, and clean up your recordings in Logic (Logic quick reference: page 9)
3. **Build instruments** — Import sounds into Quick Sampler and experiment with playback modes (Quick Sampler modes: page 10; Instrument builder: page 13)
4. **Compose** — Use your custom instruments to build a short piece with at least 3 layers (Layer plan: page 14)
5. **Mix** — Apply EQ, effects, and automation. Balance levels and add polish.
6. **Finalize** — Bounce your track and prepare your presentation
7. **Present & Get Feedback** — Create your own Padlet post with 3 questions you want classmates to answer about your project. Present to the class. During classmates' presentations, answer at least 2 of their 3 questions on their Padlet post.

© 2026 Brian Lotze · Hudson Beat · For single-classroom use

FOUND SOUND

Project sheet · tips and checklist

STUDENT

Name _____ Date _____

TIPS FOR SUCCESS ·

- The weirder the source sound, the more interesting your instruments will be. Don't just record obvious things.
- Spend time in Quick Sampler experimenting with Slice mode — it turns one recording into a whole kit.
- Layer your sounds. A single found sound as a melody is thin. Stack textures underneath it.
- The goal is transformation — if your audience can't tell where the sounds came from, you're doing it right.

SUBMISSION CHECKLIST ·

- ☐ Bounced .mp3 or .wav uploaded to your class page
- ☐ Zipped .logicx project file uploaded to your class page
- ☐ Files named correctly: "Your Name – Found Sound"
- ☐ At least 5 source sounds recorded and used
- ☐ Padlet post created with your 3 feedback questions
- ☐ Answered at least 2 questions on classmates' Padlet posts during presentations

NOTES ·

FOUND SOUND

Rubric

RUBRIC

/ 25

Name _____ Date _____

GRADING RUBRIC /25

Found Sound | Open-Ended Project

Each category is scored 1–5. Your final grade is the average of your self-score and your teacher's score.

Category	1	2	3	4	5
CREATIVITY & ORIGINALITY	Minimal creative effort; relies on defaults or clichés	Some creative ideas but largely predictable	Shows originality; experiments with sound or style	Highly creative; unique approach with clear artistic intent	Exceptional creativity; innovative, bold, and expressive
TECHNICAL SKILL / DAW USE	Limited understanding of Logic Pro tools	Basic tool use with frequent errors	Competent workflow; uses tools correctly	Advanced use of Logic features and shortcuts	Expert-level command of multiple Logic systems
COMPOSITION & STRUCTURE	Disorganized; no clear form or direction	Some structure present but underdeveloped	Clear, cohesive form with logical sections	Engaging structure with dynamic progression	Professional pacing, flow, and musical arc
SOUND DESIGN & MIX QUALITY	Poor sound choices; unbalanced or muddy mix	Some variety but inconsistent levels and EQ	Good sound selection; mostly balanced mix	Strong sound palette; clean, well-balanced mix	Exceptional sound design; professional-quality mix
DOCUMENTATION & PRESENTATION	Missing or incomplete; no reflection	Minimal documentation with little insight	Satisfactory; provides basic detail and reflection	Well-documented; clear and thoughtful reflection	Exceptional; thorough insight and polished delivery

Student Score: _____ / 25	Teacher Score: _____ / 25
Final Grade = Average of Student + Teacher = _____ / 25

FOUND SOUND

Reflection · how did it go?

STUDENT

After presenting

Name _____ Date _____

WHAT A REFLECTION IS

A reflection is a written or oral conversation about how you did on the project and what you would do differently next time. Answer all four prompts in your own words. You choose how.

☐ **Written.** I will write my answers on this page.

☐ **Oral.** I will talk my answers through with my teacher. My teacher fills in the box at the bottom.

1 **What went well?** Name something in your project you are proud of, and say why it worked.

2 **What did you struggle with?** Say what was hard and what you tried to fix it.

3 **What would you do differently next time?** Be specific: a step, a choice, a sound or a tool.

4 **Look at the rubric (page 18).** Which category are you proudest of, and which would you work on first next time?

ORAL REFLECTION · TEACHER

Date: _____ **Prompts covered (1-4):** _____

Key points I heard: _____

TERMS OF USE

Thank you for your purchase!

© 2026 Brian Lotze. Hudson Beat by Brian Lotze. All rights reserved. This purchase gives **one teacher** a license to use this resource (the PDF and the intro deck) with their own students.

YOU MAY

- Print and copy pages for your own classroom and students, year after year.
- Present the intro deck to your own classes and edit it for your own teaching.
- Share pages with your own students through a password-protected class site or learning platform.
- Leave the pages for a substitute teacher who teaches your own students.

YOU MAY NOT

- Share, email or copy this resource for other teachers, a whole school or a district. Additional licenses are available on Teachers Pay Teachers.
- Post any part of it on a public website, shared drive or social media.
- Sell, give away or claim any part of it as your own, or edit it into a new product.

QUESTIONS?

Please use the Q&A tab on the Hudson Beat by Brian Lotze store on Teachers Pay Teachers. If something looks wrong, let me know there and I will fix it.

CREDITS

- Project sheet, rubric, teacher notes and intro deck: original work by Brian Lotze, Hudson Beat.
- Worked example (an invented 45-second piece described on paper), the sound-to-instrument, Quick Sampler modes and timeline drawings and layouts: original work, Hudson Beat.
- No audio, video, lyrics, album art, screenshots, presets or chart data are included. The three suggested resources are named exactly as the teacher listed them, with no link or content; YouTube is not affiliated with or endorsing this resource. Padlet is named only as an example of a tool you may already use.
